

Introduction to the Pre-exposure Prophylaxis (PrEP) Package

The Pre-exposure prophylaxis (PrEP) training package was developed by ICAP at Columbia University to support the implementation of PrEP. The training curriculum and tools serve as a foundation and may need to be adapted to specific contexts. As the use of PrEP is an evolving area, it is expected that these documents will require updating over time as new information regarding PrEP arises and implementation experiences accumulate.

Please note that French, Portuguese, and Spanish translations of these materials will be available on the ICAP website soon.

The PrEP package includes the following components:

1. Training curriculum:

- a. PrEP training slide set
 - Note that slides **#18, 33, and 48** should be adapted to the local country context.
- b. PrEP trainer notes (including provider job aids)
- c. Certification of participation template

2. PrEP M&E tools:

- a. PrEP Screening for Substantial Risk and Eligibility
 - This tool documents the process for determining eligibility for PrEP among patients interested in starting PrEP, and documents referrals to appropriate services including PrEP.
- b. PrEP Facility Record
 - This tool serves as a PrEP patient medical record to be maintained at the health facility providing PrEP.
- c. PrEP Patient Register
 - This tool provides a summary of key longitudinal information for each patient from the PrEP Facility Record.
- d. PrEP Monthly Summary Form
 - This tool provides a template for routine monthly aggregate reporting on PrEP services for facilities. Aggregate numbers can be calculated from information recorded on the PrEP Patient Register.
- e. PrEP Quarterly Cohort Report
 - This tool includes a worksheet and summary reporting template for calculating and reporting PrEP patient outcomes, such as retention and follow-up HIV testing. The information needed to complete this report is available on the PrEP Patient Register.
