

## Program Start

2004

## Key Technical Areas

HIV Prevention, Care, and Treatment  
Health Management Information Systems  
Monitoring and Evaluation  
Nursing and Midwifery  
Research

## Current Funders

Bill and Melinda Gates Foundation  
Centers for Disease Control and Prevention (CDC)  
Health Resources and Services Administration (HRSA)  
United States Agency for International Development (USAID)

## Current Projects

- **Technical Assistance to the Ministry of Health for HIV Services and Program Transition in the Republic of Mozambique under PEPFAR**  
ICAP provides technical assistance to the Ministry of Health (MOH) and district health directorates in Nampula Province to provide comprehensive, high-quality HIV services in health facilities. ICAP is working with district-level health authorities to build the capacity of multidisciplinary teams to provide HIV-related services, including adherence and psychosocial support, prevention of mother-to-child transmission (PMTCT) of HIV, pediatric HIV care, cervical and breast cancer screening, and prevention of gender-based violence. *(funded by PEPFAR through the CDC)*
- **Seasonal PrEP Use Study in Gaza Province**  
ICAP is partnering with the World Health Organization and The Employment Bureau of Africa (TEBA) to study the use of pre-exposure prophylaxis (PrEP) for the prevention of HIV acquisition by female partners of miners during periods of increased risk of infection. ICAP is conducting a feasibility study using quantitative and qualitative methods to assess the knowledge, understanding, and perceptions of PrEP among migrant miners' female partners, miners themselves, and health care providers. The study is exploring the willingness of female partners to take periodic PrEP during the time when their partners are visiting home, and will assess possible structural and individual-level barriers to accessing PrEP in Gaza Province, Mozambique. *(funded by the Bill and Melinda Gates Foundation)*
- **Technical Assistance for Strategic Information Activities in the Republic of Mozambique**  
ICAP is providing technical assistance to the MOH and to the Department of Health Information to implement priority M&E and surveillance strategies to strengthen national HIV health information systems; streamline, enhance, and integrate existing M&E tools; and support data dissemination. The scope of work includes ongoing public health evaluations with sentinel cohorts of patients enrolled in HIV care and treatment services and an assessment of ways to improve access to PMTCT. ICAP also supports capacity building of providers and managers at all levels of the health systems to use SI for evidence-based planning and performance management. *(funded by PEPFAR through the CDC)*

# Mozambique

- **USAID/MSPH/ISCISA Management Education Partnership**

ICAP and the Mailman School of Public Health (MSPH) are partnering with the Instituto Superior de Ciencias de Saude (ISCISA) to create an accredited health care management and administration (HMA) degree program. This partnership focuses on curriculum development, institutional learning and development, and knowledge and skills transfer through active learning and direct mentorship by MSPH faculty. *(funded by PEPFAR through USAID)*

- **Global Nurse Capacity Building Program (GNCBP)**

Through the Global Nurse Capacity Building Program (GNCBP), ICAP is working to support and advance the role of nurses and midwives to address essential population-based needs, including HIV and other life-threatening conditions. ICAP collaborates with the MOH to update and advance nursing policy and planning, professional regulation, pre-education, and professional practice, and builds the capacity of key nursing institutions, including the MOH's Department of Nursing, the Mozambican National Nursing Association, and the Mozambican Association of Midwifery. *(funded by PEPFAR through HRSA)*

- **Engage4Health**

This site-randomized implementation science study compares the effectiveness of a combination of interventions versus the current standard of care in linking and retaining newly-diagnosed HIV patients in care and treatment in Inhambane Province and Maputo City. The goal is to show that a combination of interventions will be more effective in mitigating the multiple barriers HIV-positive patients face when moving from diagnosis to treatment. *(funded by PEPFAR through USAID)*

## Recently Completed Projects

### **Building Mozambican Capacity to Implement Quality HIV/AIDS Prevention, Care, and Treatment Programs in Mozambique (2010 - 2016)**

ICAP worked at the national, regional, and community level to strengthen technical capacity and program management within the MOH, NGOs, and community-based organizations to implement HIV-related services. In addition, ICAP built the capacity of provincial and district health teams to plan and implement HIV programs that maximized limited resources and improved local ownership and accountability through sub-agreements with provincial health and district directorates, and the Health Sciences Training Institute.

ICAP is also working closely with provincial health directorates to roll out voluntary medical male circumcision services, including addressing related infrastructure, human resources and training, quality assurance, and monitoring and evaluation (M&E) needs, supporting the scale up and expansion of services in seven districts of Zambezia. *(funded by PEPFAR through CDC)*
